## <naver.com 검색>

The screenshot displays a Windows desktop environment. On the left, a 'Whois' application window shows the search results for 'naver.com'. The search criteria are set to 'Exact Match' and 'Whois.internic.net'. The results indicate that the domain is registered by GABIA, INC. and is currently in a 'clientDataProhibited' status. On the right, the Eclipse IDE shows the source code for 'WhoisGUI.java'. The code is a Java Swing application that implements a GUI for performing Whois searches. It includes imports for Java AWT, Swing, and CORBA, and defines a 'WhoisGUI' class that extends 'JFrame'. The GUI consists of a search string field, a search button, and a text area for displaying results.

## <google.com 검색>

The screenshot displays a Windows desktop environment. On the left, a 'Whois' application window shows the search results for 'google.com'. The search criteria are set to 'Exact Match' and 'Whois.internic.net'. The results indicate that the domain is registered by WAKAMONITOR, INC. and is currently in a 'serverDataProhibited' status. On the right, the Eclipse IDE shows the source code for 'WhoisGUI.java'. The code is a Java Swing application that implements a GUI for performing Whois searches. It includes imports for Java AWT, Swing, and CORBA, and defines a 'WhoisGUI' class that extends 'JFrame'.
